## DETAILED ACTION

### *Election/Restrictions*

Applicant's election without traverse of Group I and the embodiment of Figure 1c in the reply filed on June 16 is acknowledged.

Claims 3, 4, 13, and 14 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, and 15-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Ammann et al (U.S. Patent No. 4,265,280). Ammann et al discloses in Figure 1a connector member (10) comprising of connector elements (12, 14) connected to containers (38) through tubings (36). Figure 2 illustrating the connectors (12, 14) each carry means for retention to the other connector. Figure 2 further illustrating the connectors (12, 14) each houses an opaque wall (22) and these walls (22) face each other and are in contact with each other when the connectors (12, 14) are in locked position.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ammann et al (U.S. Patent No. 4,265,280). Ammann et al discloses in Figure 1a connector member (10) comprising of connector elements (12, 14) connected to containers (38) through tubings (36). The Ammann et al device does not teach the connector elements (12, 14) can be connected to each other by means of an adhesive. However, the Ammann et al teaches each of the connectors (12, 14) carries means for retention to the other connector. The retention means includes a pair of opposed gripper arms means (24) positioned adjacent a first end (26) of housing (16), and defining a track (28) for retaining a flange positioned within the track (28). Therefore one of ordinary skill in the art would have recognized the Ammann et al's retention means as an equivalent way of connecting the two connecting elements (13, 14).

***Allowable Subject Matter***

Claims 7-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
